The New Generation Web

Web technologies have become an essential for corporate communication, collaboration and application development. The new generation web has made it possible for companies to more actively engage with their stakeholders (with customers, suppliers, partners) to ensure for their integration with the business.

Régens provides for enterprise clients a new business application platform which can pursue new horizon in business by greatly reducing their IT expenditures.

As a result there is less of a need for software (as a package: licensed and distributed) and far more emphasis is placed on web applications provided as a service.

Technology

After a period of stagnation, web powering technologies are now rapidly developing. In the recent years more and more web applications are being developed that are functionally richer and more responsive than the static pages typical for traditional web technologies.

One breakthrough development has been the idea of the **web as a platform**. The web can be used as a platform, where software services run within a browser window, which communicates via the internet with remote servers.

We are entering the 'next phase' – the new and 'improved' webapps!

Web Applications

This new technology leads developers and users to turn to new types applications. Web 2.0 includes community oriented applications and services such as blogs, wiki, video sharing, social networking, RSS and podcasting. These new information sharing platforms have resulted in a more socially connected Web in which people can contribute as much as they can consume.

Régens is always on the edge of innovative solutions. Régens' web group provides the most flexible and cost effective solution and presents advantage of the many benefits this new technology has to offer.

Our Web Group is proficient in open source softwares (OSS) & technology frameworks such as **Joomla, Drupal, OpenERP, Explorer**.

Access to OSS allows us to spend more time focusing on our clients' individual needs, customize solutions and provide them with **financially flexible conditions**.

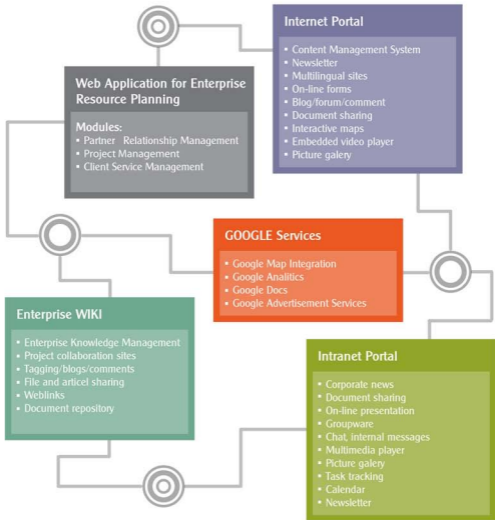

Having the support of a huge development community when working with these applications enables us the make continual advances in development, making it easier for us to solve a multitude of problems.

By benefitting from the many advantages of OSS we are able to be even more flexible and customer-orientated, ensuring that we can always reach our clients' goals.
